

NOMAN AHMAD

Software Developer Intern — Backend & AI Software Engineer

+91 93563 80208 — nomanahmad9356@gmail.com — [GitHub: Noman-Ahmad25](https://github.com/Noman-Ahmad25) — [LinkedIn: noman-ahmad25](https://www.linkedin.com/in/noman-ahmad25)
Satna, Madhya Pradesh, India

Summary

Computer Science undergraduate with internship experience building backend systems in Python, FastAPI, PostgreSQL, and Node.js. Skilled in REST APIs, database migrations, role-based access control, and LLM applications that put deterministic logic first.

Technical Skills

Languages: Python, Java, JavaScript, TypeScript, SQL

Web & Backend: FastAPI, Flask, Node.js, Express.js, React, Next.js, Tailwind CSS, REST APIs, WebSockets, JWT, OAuth, RBAC

Databases: PostgreSQL, MongoDB, Redis, SQLAlchemy, Alembic, pgvector

Testing & DevOps: Pytest, Vitest, Ruff, mypy, Git, GitHub Actions, CI/CD, Docker, Linux, Render

AI / ML: Google Gemini, LLM orchestration, structured outputs, RAG, embeddings, semantic search, FAISS, YOLO, Roboflow

Experience

Software Developer Intern, Dream Filler

Sep 2026 – Present

- Fine-tuned a YOLO object-detection model on a custom dataset, collecting and labeling images with Roboflow.
- Building new features end to end for a mobile app using Flutter, Node.js/Express, and MongoDB; redesigned the home screen UI.

Backend Development Intern, Quantumbay Cloud (Remote)

Jul 2026 – Sep 2026

- Developed FastAPI and PostgreSQL APIs for a modular pharmacy ERP platform (authentication, staff, inventory, purchasing, billing).
- Designed database schemas and Alembic migrations, resolving migration conflicts across independently developed modules.
- Implemented role-based access control and branch-level data handling; debugged routing and API-contract issues during service integration.

Projects

AI Requirement Analyzer & Project Decision Engine

FastAPI, Next.js, PostgreSQL, Gemini, Docker

- Turns vague, contradictory client specs into structured requirements: Gemini extracts, a deterministic engine decides TAKE / REVIEW / DECLINE.
- Enforced schema-validated JSON (Pydantic v2) with automated recovery from malformed LLM output.
- Designed bounded context assembly with provenance tags to reduce hallucination; added multi-tenant workspaces and capability matching.

Deterministic-First AI Ticket Triage System (In Development)

Python, Gemini, SQL, REST

- Built a pipeline that normalizes tickets, detects language, extracts IDs with regex, checks VIP status, and flags legal-risk terms before any LLM call.
- Used Gemini only for intent, sentiment, and routing, with a human-in-the-loop dashboard showing editable AI drafts.

AlumniConn — Multi-Tenant Student–Alumni Platform (Live on Render)

React 19, TypeScript, FastAPI,

PostgreSQL

- Built a multi-tenant platform with JWT authentication, four-tier RBAC, real-time WebSocket messaging, and Cloudinary image uploads.
- Implemented embedding-based mentor and connection recommendations using semantic ranking.

RepoMind — AI-Powered Repository Intelligence CLI

Python, Tree-sitter, pgvector, Gemini, Docker

- Combined deterministic Tree-sitter analysis with Gemini reasoning to surface technical debt; automated Pytest, Ruff, mypy, and GitHub Actions checks.

Achievements & Certifications

India Runs Data & AI Challenge — Built a FAISS and Sentence-Transformers candidate-ranking pipeline for 100,000+ resumes; deployed on Hugging Face Spaces.

Data Structures and Algorithms using Java — NPTEL

Nov 2025

Responsive Web Design — freeCodeCamp

Aug 2025

Education

Vindhya Institute of Technology and Science

Satna, Madhya Pradesh

Bachelor of Technology (Computer Science)

Expected 2027
